## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, 10, drawn to product made, classified in classes 439, 324, 227, 164, 227, 414, 417
- II. Claim 8,9, drawn to method of using, classified in classes 29, 438.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the latch functioning to releasably connect a first parallel plate to a second parallel plate can be practiced not just for testing PCA in vacuum powered test, but in a different process (for example, in double acting mechanical equipment, robotically operated workstations, machines for shaping pieces of metal, etcetera). Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Margaret Polson on 01/31/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
